

# Power BI Report Analysis

## Page 1: Executive Summary (Sales Analytics Dashboard)

---

*This page provides a high-level overview of business performance, answering "What happened?"*

### Q1: What is the overall health of the business right now?

**A:** The business is generating strong volume and revenue. Based on the top KPIs:

- **Total Sales:** \$2.33M
- **Total Profit:** \$292.30K
- **Profit Margin:** 12.56%
- **Order Count:** 10K orders

### Q2: Which customer segment drives the most sales?

**A:** The **Consumer** segment is the largest driver, accounting for **50.32% (\$1.17M)** of total sales. This is followed by Corporate (30.77%) and Home Office (18.92%).

### Q3: Which regions are performing best in terms of sales?

**A:** The **West** region is the top performer with **\$739.81K (31.8%)** in sales, closely followed by the **East** at \$691.83K (29.74%). The South is the lowest performing region at 16.84%.

### Q4: How do sales and profits trend throughout the year?

**A:** The "Monthly Sales and Profit Trend" chart shows a clear seasonal spike. Sales and profits are relatively steady from January to August, but experience a significant surge starting in September, peaking in November and December.

### Q5: Which specific products are driving the most profit?

**A:** At the sub-category level, **Copiers** are the most profitable item (\$56K), followed by **Phones** (\$45K) and **Accessories** (\$42K).

## Page 2: Profitability Deep Dive

---

*This page answers "Why did it happen?" specifically focusing on margins and losses.*

**Q6: Overall, which product category has the best and worst profit margins?**

**A:**

- **Best: Technology** leads with a healthy **17.45%** profit margin, closely followed by Office Supplies at 17.22%.
- **Worst: Furniture** is severely underperforming with a very thin profit margin of just **2.61%**.

**Q7: What is causing the low profitability in the Furniture category?**

**A:** The low margin in Furniture is driven primarily by one specific sub-category: **Tables**. While Chairs (\$27K) and Furnishings (\$14K) are profitable, **Tables are operating at a loss of -\$18K**.

**Q8: Are there any other specific products losing money?**

**A:** Yes. Looking at the "Profit Margin by Sub-Category" chart, **Tables** are the biggest loss-maker with a margin of **-8.55%**. **Bookcases** are also barely breaking even, showing a tiny red bar indicating a slight loss.

**Q9: How are discounts affecting our overall profitability?**

**A:** Discounts are having a devastating impact on profits. The "Profit Margin % by Product Category & Discount Range" table shows a clear correlation: as discounts increase, profits turn into significant losses.

- For example, if a Furniture item is discounted between 30-40%, the profit margin drops to **-39.21%**. If discounted over 50%, the margin plummets to **-105.91%**.

**Q10: Which category is most vulnerable to high discounts?**

**A: Furniture** is the most vulnerable. Even at a modest 20-30% discount range, Furniture's margin turns negative (-10.77%). By comparison, Technology maintains a positive 8.68% margin in that same discount bracket.

**Q11: What is the main takeaway from the profitability deep dive?**

**A:** The company has a severe discounting problem, particularly within the Furniture category. To stop financial bleeding, the business must immediately cap discounts—especially on Tables—and reevaluate the pricing strategy for the Furniture division to bring its margins closer to the Technology and Office Supplies categories.
